Continuation of Attachment(s) 9. Other: Claims 1-47 are allowed as the prior art fails to anticipate or obviate a bidirectional optical amplifier module using four (4) amplifiers with a mid-stage signal processor, and using four different optical paths as claimed. The references cited by the Examiner (PTO-892), and the references cited by Applicant (PTO-1449) disclose bidirectional optical amplifier systems having four amplifiers, a mid-stage device, and 4 optical signal paths. However, these references fail to disclose or obviate the signal paths set forth in the allowed claims. Many of the closest prior art systems are depicted in figures 1A-1D of Applicant's drawings as described in Applicant's specification.
